PRODUCT INFORMATION

VINCITRO is a highly effective surfactant designed for use with insecticides, miticides, fungicides, herbicides, plant growth regulators, defoliants and nutrients. **VINCITRO** is designed for superior spreading, penetration and uniform distribution. The Non-Ionic (NIS) chemistry in **VINCITRO** enhances the physical and chemical properties of the spray solution and assists in overcoming water repellency of the leaf surface.

DIRECTIONS FOR USE

Prior to use, read all the directions on this label and on the labels of the manufacturers' products being used with **VINCITRO**. The manufacturers' labels for specific usage and restrictions has precedence over directions for use referred to on the **VINCITRO** label. Test for compatibility prior to mixing and application with other chemicals. Always test new tank mix combinations before widespread use.

If unsure, check with the manufacturers or contact your local State Extension Service if you have questions. To ensure thorough mixing, it is suggested that you recirculate mini tanks and bulk tanks or shake containers before using. Pre-rinse all tanks, spray lines or containers thoroughly before adding **VINCITRO**. Increasing tank mix compounds will increase precipitation and phytotoxicity risk. Extended high temperatures (>90° F) with some tank mixes may increase phytotoxicity risk and should be tested and observed before widespread use.

PRECAUTIONS

- Do not apply to fruiting stages of pome fruit, cherries, table grapes or other sensitive or stressed crops without first consulting your Innvictis Crop Care representative.
- When combining in tank mixes with EC products or copper, test for compatibility/sensitivity on a few plants before making a large-scale application.
- **NOTE:** **VINCITRO** reduces dew formation for up to 7 days and therefore may increase the risk of frost damage in frost prone areas.

NOTE: NOT FOR AQUATIC USE.

MIXING

Fill tank one-half full with water. Add the required amount of other tank mix products while agitating. Add remainder of the water. Add the recommended amount of **VINCITRO** last and continue agitation until completion of spraying. For best results, use within 24 hours of mixing. Antifoam and buffering agents may be used if required.
